

with the following replacement paragraph:

The "enable array" function may be used to enable each array when installed. The controller 80 will be prevented from moving any array that has not been enabled. Controller 80 will record in memory which arrays have been enabled. The "disable array" function may be used to disable arrays in a similar manner.

**IN THE ABSTRACT:**

According to files now in possession of counsel of record, it appears that the parent Application Serial No. 09/713,614 may have been filed without an abstract. The abstract appears to have been added by amendment. Accordingly, please add the following abstract as a separate page following the claims:

--An antenna control system enabling the remote variation of antenna beam tilt. A drive means continuously adjusts phase shifters of a feed distribution network to radiating elements to continuously vary antenna beam tilt. A controller enables the beam tilt of a number of antenna at a site to be remotely varied.--

**IN THE DRAWINGS:**

Included is new Figure 9, which was submitted in the grandparent Application Serial No. 08/817,445, filed October 16, 1995, in a document entitled "Amendment To Office Action Dated November 12, 1999," which amendment was filed on May 12, 2000. Figure 9 is now part of the replacement formal drawings submitted herewith.

**IN THE CLAIMS:**

Please cancel claims 2-21 without prejudice. This leaves one claim, namely claim 1, still remaining in the subject continuation application. Please base the filing fee on the single remaining claim.
